INSTALLATION INSTRUCTIONS

Materials:

- Glass units
- Pre-fit snap-in place glass holders
- Fastening screws
- 1 tube acoustical sealant
- 1 small block of wood for snapping tracks into place

NOTE: Finished frame dimensions are 1/2" smaller height and width than the rough opening provided. This allows easy leveling, installation and acoustical sealing.

Step 1: Place frame inside your rough opening of wall.

Step 2: Center, level and shim the frame to your desired satisfaction.

Step 3: Secure window frame to your wall opening with screws provide through the pre-drilled holes in glass channel.

Step 4: Caulk space between window and opening on all four sides with the acoustical sealant provided. Taking extra care of sealing completely.

Step 5: Trim out finished window opening as desired.

Step 6: Install glass! (Note: This will be at least a two person job for most window sizes however it doesn't have to be done by a certified glazing contractor.)

HANDLING BEFORE INSTALLATION: Glass should always be handled or placed vertically on edge, never laid flat to protect from breaking.

- Take the bottom edge of the glass and set it gently on the setting pads featured on the lower side of the glass channel.
- Gently push top half of glass into place against rubber stop on inside top half of glass channel.
- Snap the pre-fit bottom track cover into place (you will hear the cover "snap" when it is properly attached and this can be done by using force with hand or small block of wood provided.
- Snap pre-fit top track cover into place.
- Snap both pre-fit side track covers into place.

Finished!!!!!!
