**Acoustical Caulk**-Acoustical Caulk is a non-hardening, sound absorbing material with the active ingredient of Ethylene Glycol. Silicone is not an acoustical caulk so please do not buy for a soundproofing project. Acoustical Caulk is used at the seams and perimeter of the American Mass Loaded Vinyl. 29 oz tubes OSI-175 sc or Tremco Smoke and sound \$9.50 ea

Features UL tested and classified

- Non-flammable formulation
- Easy application and clean up
- Will not harden, crack or separate
- Non-staining and non-migrating
- High degree of adhesive and cohesive strength

Green Series SC-175™ was developed primarily for commercial construction utilizing lightweight cavity walls and floor systems. The sealant is used for exposed and unexposed applications at perimeter joints, floor and ceiling runners (either wood or metal), cut-outs in gypsum board, veneer plaster systems and other areas where a sound rated assembly is required.
